SERVALL-STAZDRY
The New Type
SANITARY LITTER

For Poultry, Cattle, Horses and Pets
Protects Baby Chicks Against
DAMPNESS and COCCIDIOSIS

Servall-Stazdry safeguards against dampness in the brooder house and is an important aid in preventing and controlling coccidiosis. Its light color makes it easy to detect any irregularities in the color of the droppings.

In preparing the brooder house for baby chicks, the floor should be covered with the litter to a depth of not more than 1" to 1½". The depth will increase with use. Cloth bags or paper should be placed over the litter for the first few days. By daily stirring Servall-Stazdry with a fork, you hasten evaporation, helping to keep the litter dry which is one of the best safeguards against coccidiosis. Properly used, Servall-Stazdry will last from 4 to 12 weeks depending upon the number of chicks, weather, laxative effect of feed, heat and ventilation.
